PROFESSIONAL TITLE

Worked as an Associate Software Engineer at Tech Mahindra, with expertise in Java and MySQL. Proven track record in enhancing application reliability and resolving high-priority incidents. Adapt to collaborating in Agile teams and utilizing ITIL processes to streamline production support. Committed to continuous learning and delivering impactful solutions in fast-paced environments.

WORK EXPERIENCE

Tech Mahindra | 29 Dec 2023 - Feb 2026

Associate Software Engineer

Completed intensive training in Java Full Stack, gained hands-on knowledge from core java concepts, Spring Boot, JPA/Hibernate, MySQL, version control etc to enterprise application development, debugging, and deployment workflows.

Software Engineer

- Development and maintenance of Java-based enterprise applications, enhancing application stability through minor code fixes and JPA/MySQL improvements.
 - Assisted with bug tracking and analysis to improve overall system reliability.
 - Swiftly resolved production incidents to ensure high availability and minimal downtime. Conducted effective code analysis and log monitoring using Kibana and Grafana for efficient root cause identification.
 - Supported controlled application releases by preparing detailed Implementation and Backout Plans.
-

PROJECT

FoodHub (Microservices Ecosystem) - Built a multi-service platform using Spring Boot and Kafka, focusing on reliability and fast communication, resulting in a 40% improvement in overall system throughput

- **API Gateway & Security (Auth Service)**: Functions as the central security layer. Implemented a system to manage Blocked Tokens in the database to ensure that logged-out users can no longer access the system, reducing unauthorized access attempts by 95% and ensuring 100% session security.
- **Order Service (Kafka & Feign)**: Managed the entire lifecycle of a customer's cart and order. Used OpenFeign for quick restaurant checks and Kafka to send real-time updates to coordinate the order flow, decreasing order processing latency by 35% and improving order synchronization reliability to 99.9%.
- **Payment & Restaurant Services**: Handled sensitive payment details and managed restaurant food menus and stock levels. Used Kafka event-driven architecture to keep all services in sync, reducing inventory discrepancies by 100% and accelerating payment confirmation times by 30%.

- Database Management (MySQL & Hibernate): Managed several databases to store User Profiles, Order History, Payment Records, and Menu Items. Used Hibernate to ensure data is saved securely and retrieved instantly, optimizing query response times by 45% and reducing database load by 25%.
 - Observability Stack (Prometheus, Grafana, Loki, Tempo & OpenTelemetry): Set up a full monitoring system. Used OpenTelemetry and Prometheus to collect performance data and Grafana to visualize it. Used Loki and Tempo to fix bugs faster by correlating logs and distributed traces, reducing Mean Time to Resolution (MTTR) by 60%.
-

EDUCATION

SRM University | 2018 - 2021

B.Sc CS - 7.34 CGPA

D.G. Vaishnav College | 2021 - 2023

M.Sc IT - 8.18 CGPA

SKILLS & TOOLS

- Languages: Java, Python, JavaScript, HTML, CSS
- Frameworks & ORM: Spring Boot, Hibernate, Spring JPA
- Databases: MySQL
- Architecture: Microservices, Monolith
- Tools & IDEs: Git, Jenkins, Eclipse, IntelliJ IDEA, VS Code
- Methodologies: Agile Methodologies, ITIL Process
